Profile

Aspiring Business student with hands-on experience in full-stack development, database systems, and machine learning. I'm eager to strengthen practical expertise in AI application development through intensive industry projects, leveraging my strengths in software systems and AI-powered products while continuously expanding my technical capabilities.

Education

Hanoi School of Business and Management, VNU

Hanoi, Vietnam

Bachelor of Enterprise Management and Technology; GPA: 3.64/4.0

2023 – 2027

Relevant Coursework: Data Science, Database Systems, Programming & Application of IT in Business, Foundation Math for Computer Science, Applied Math.

Technical Skills

- **Programming:** Python, JavaScript, SQL, React/Vite, HTML/CSS
- **Data Processing & Analysis:** Pandas, NumPy, Data Cleaning, Feature Engineering, Exploratory Data Analysis (EDA), Matplotlib
- **Machine Learning:** Scikit-learn, Linear Regression, Logistic Regression, Random Forest, Model Training, Cross-Validation, Hyperparameter Tuning, Model Evaluation (Accuracy, Precision, Recall, F1-score, RMSE, MAE, MAPE, R²)
- **Backend & APIs:** Node.js/Express, RESTful APIs, Cohere API Integration
- **Databases:** PostgreSQL (Supabase), SQL, Database Schema Design, ERD
- **Software Engineering:** SDLC, UML, Git
- **Deployment & Cloud:** Firebase Authentication, Vercel, Render

Soft Skills

- **Soft Skills:** Analytical Thinking, Problem Solving, Stakeholder Communication, Cross-functional Collaboration, Presentation & Documentation, Self-learning
- **Languages:** English (IELTS 6.5), Chinese (HSK 4)

Projects

1. Pang Pang SmartOps – AI-Powered Restaurant Operations Platform (Personal Project) 2026
Link project: <https://github.com/GIANG2385/FINAL>
Description: AI-powered restaurant management platform covering ordering, kitchen, inventory, reservations, and loyalty while providing real-time operational insights for restaurant managers.
Responsibilities: Developed full-stack system, designed relational database and role-based access control, integrated AI chatbot with live operational data.
Technologies: React, Vite, Express.js, Node.js, Supabase PostgreSQL, Firebase, Cohere API.
Challenges: Restaurant managers lacked a centralized view of operational performance and needed to interpret multiple dashboards before making decisions.
Solution: Built an AI assistant connected to live operational metrics and implemented automated anomaly detection that continuously monitors inventory shortages, kitchen overload, staffing issues, and revenue deviations.
Outcome: Delivered a production-ready platform with automated operational alerts with an AI consultant.
2. MUSA Online Music App (Software System Design) 2025
Description: Designed a Spotify-style music streaming platform following the complete Software Development Life Cycle (SDLC), from business analysis to system architecture and UI prototyping.
Responsibilities: Gathered requirements, designed UML diagrams, defined system architecture and user workflows.
Technologies: UML, Draw.io, SDLC, HTML, CSS.
Challenges & Solutions: Designed scalable workflows for five user roles using role-based system architecture.
Outcome: Produced complete software design documentation ready for implementation.
3. Stock Price Prediction – Machine Learning (Team project) 2025
Description: End-to-end ML pipeline predicting next-day prices for 10 Vietnamese banking stocks.
Responsibilities: Built data pipeline, engineered features, trained and evaluated Random Forest models.
Technologies: Python, Pandas, Scikit-learn, Random Forest, SelectKBest.
Challenges & Solutions: Improved prediction accuracy through feature engineering, normalization, and cross-validation.
Outcome: Developed a reusable forecasting pipeline using 14,000+ trading records and 17 technical indicators.
